

NEWS RELEASE: 8th March 2012

We are delighted to announce that the PHG Foundation Health Needs Assessment Toolkit for Congenital Disorders is now freely available to the public.

The seven topics now available are:

- Down's syndrome
- Neural tube defects
- Orofacial clefts
- Health services
- Preconception care and screening
- Prenatal services
- Newborn screening

If you have previously registered, you can access the Toolkit [here](#).

If you have not previously registered to use the Toolkit, please [register online here](#). The Toolkit is available at no cost to users but we do ask that you acknowledge your use of the Toolkit including in any publications (details of how to acknowledge are on the Toolkit home page).

Please remember to keep telling your colleagues and peers about the Toolkit and encourage them to register at www.bornhealthy.org so that they can be updated as new topics are added.

We are updating the other condition based topics of the Toolkit and will be releasing the following Toolkit sections later in the year:

- Congenital Heart Disease
- Thalassaemias
- Sickle Cell Disease
- Fetal Alcohol Spectrum Disorder
- Teratogens
- Congenital hypothyroidism and Iodine deficiency disorders
- Rhesus D Haemolytic Disease of the newborn
- Glucose-6-phosphate dehydrogenase deficiency
- Congenital Rubella
- Congenital Syphilis

If you have any queries or difficulties accessing the Toolkit email toolkit@bornhealthy.org
